Q.8/13 would like to inform OMA of the progress of draft Recommendation Y.cmr (Deployment model for customized multimedia ring service) at its meeting on January 14-25, 2008.

This draft Recommendations defines the deployment models for the customized multimedia ring service (CMR), including use cases, network deployment models and service deployment management.

It is recognized that OMA plays an important role in service implementation, as well as in developing the service framework specifications to support the creation of interoperable end-to-end services. We therefore would like to provide OMA with the information of the draft Recommendation Y.cmr, and hope OMA take into consideration the aspects of service management such as content management etc. The feedback will be highly appreciated.

Q.8/13 is looking forward to the opportunity to co-operate closely with OMA on service deployment.

The attached is the draft Recommendation of Y.cmr, which is output at ITU-T SG 13 meeting held in Seoul, January, 2008. (TD 604 (WP 3/13)).
