The following are comments made by OMA Members to the survey question: **What type of information would you like to be receiving from OMA?** (Question 12)

ROADMAPS, SPECIFICATIONS, TEST FESTS

- Enabler roadmaps with committed dates
- Technical issues for each enabler
- Technical Roadmap
- Roadmaps for planned releases and their features
- Status of interoperability testing.
- Any specifications, test fest reports
- Status of standards development and status on IOT Test Fest planning.
- Milestones achieved, Interoperability results from OMA specified Enablers
- Technical achievements, business impact of OMA, market input (analyst reports/press coverage). Summary of IOP test results. Upcoming new enabler releases
- I want/need information regarding participation in Test Fests and some results of the testing"
- Results of the test fests
- About Test Fest, how to attend it? Fee? etc.
- Test results, release planning status
- More accurate and regular information about interoperability release contents.
- Updates on technical progress and new work items
- I would like to know what new standards are about to be released with a summary of changes etc.
- Reporting about status of every work item, roadmap and future plans, white papers and general documents about the different standards, architectures, etc.
- White-papers describing new technical services specified by OMA (from user point of view and from functional/architecture point of view)."
- Status on OMA activity - technical, marketing, relationship
- Easy access to the all the OMA documents.
- Status of new specifications
- Work-plans of specification releases.
- regular updates on progress, and an exec summary/white paper for the delivered specifications
- Spec. release announcement; Relevant Product information
- Recently opened spec info and status of each working groups.
- An update on working group status and current work in progress would help tremendously to small to medium companies that cannot devote a division of employees just to cover each group in OMA. This would look much like the update given by chairs to TP.
- specifications list & status
- Technical information.
- Latest OMA Spec Release. List of work in progress and near completion.
- new Specs and infos about test-festivals
- all the subject of work group or work items or BOF
- Overall WG status
- (*) List of the most updated version of specs in each Working Group
- Some sort of summary of how the different working groups are progressing. Which specifications do they have and how mature are they? For smaller companies it's sometimes hard to get the complete overview.

- Up to date information on standards
- The reflectors are good. I'm missing an overview aggregated weekly short summary on the status and remaining roadmap of each WI.
- work plan overview on TP level including progress on specification of key enablers
- new specs
- Work Item List and Status Report Release Planning
- We appreciate if we get the monthly brief report on all WG's activity, as it is difficult to monitor all WG's activity every day.
- update of the status of WG activities
- Accessible, summary information about the work going on in the different WGs
- A summary statement of which specifications were created or modified after each TP Plenary would be good. OMA seems to lack traceability in terms of specification evolution.
- Technical Plenary full agendas 6 weeks before TP
- Summaries of recent changes in specifications in certain categories (without having to subscribe to the working group lists).
- On-going work items and status
- Latest status reports on each of the working group or latest specifications.
- Specific and fast Application information
- Release Announcements; Minutes of Meetings
- Summary of upcoming votes and specs . . . Summary of approved documents . . . Summary of published documents . . .
- when are specs are submitted for approval and also when approved/not
- Summary information over activities in the selected groups. "

BUSINESS AND MARKET

- More Market Data/Analysis
- Information of progress on a level which is making sense to business responsible and product managers, so that we do not have to create this ourselves.
- Business Intelligence; Summary from the TP meetings and some important working groups
- State-of-Wireless type communications - from and entire value chain/ecosystem perspective; articles (opinion pieces) from operators, service providers, manufacturers, IT, etc
- Information on market trends; information on future works at OMA
- Newsletter, extended by industrial/marked data

NEWS & UPDATES

- A number of consolidated status reports covering all working groups (not just those that are delivering or progressing well) would be good for my company. It would need to target senior managers as well as the product managers and strategic planning.
- Newsletter with technical roadmap of enabler releases and marketing researches on these enabler releases
- MINIMAL use of jargon and MAXIMUM use of clearly written, educationally oriented prose that others in my organization will understand. The first few newsletters are a very good step in this direction, but we must make sure the techies are not our primary audience. Need to include Board actions and updates too.
- OMA Newsletter
- I like the newsletters

- Newsletter
- Events and News
- Newsletter - covering updates, events, etc.
- "News, Technical Specifications, Working Group's action plan and status report, Updated member's list
- Email news letter – monthly summary of OMA's work
- Update of the activities without too much of the technical details, like a snap shot of events. Given that there is so much activity, it is difficult to have a good snap shot of the activity.
- Monthly or bi-monthly newsletter giving update from every group
- OMA News Event, Issue, Specifications
- Updates on Specifications that are "public"
- Key issues that are being addressed and how they affect the industry
- Briefing on direction of work and timescales.
- Regular updates on the schedule for specification releases / milestones; dates for interoperability events; information on how to participate in the various Test Fests.
- Regarding industry leaderships
- Any info and updates form the groups I am interested in Did not find a way to join any mailing list yet
- Truthful overall status, but no propaganda or rose colored glasses... I'd like to see fair and balanced information, including controversy. Otherwise why bother...
- The list of products that are OMA compliant with detailed supported features.
- Short summary of active work and open issues in each group and sub-group.
- More press releases
- Certified products, etc. OMA's success will be measured by how it can enable its members to bring to bear OMA compliant products. There is no public list of products/companies that are officially OMA compliant.
- Detailed compliance lists of terminals to different OMA specifications :-)

GENERAL COMMENTS

- As a Board member I feel pretty well informed. The OMA news letters are good.
- N/A we are actively following the work and events. However a summary of the activities and decisions across all WG (with url links to relevant events) would be welcome.
- Being on current mailing lists seems to be enough at the moment for me.
- Nothing more than i get at the moment.
- Information is working well as is!
- Information is fine today -- although some digests just not relevant.
- nothing more than what i already receive
- Currently, satisfied with information provided.
- publication of official specifications, candidate enabler releases, test fest results (as much details as possible) and it would be extremely useful to maintain and publish (among members only) a work plan to give visibility of OMA's roadmap in every work item
- Facts about the organization itself, such as economy for staffing and meeting arrangements. Also work item tracking and schedule updates would be nice to have.
- "Minutes from WG (IOP Browsing) and from every Plenary.
- short status overview of the technical "state of the art"
- Information about event venues, hotels, etc, at least 6 months in advance, Ideally one year in advance.

    - Summary of all work group activities and progress every month, either sent to oma_all or in a specific easy to reach place on the website with a notification sent out. I guess the chairs would have to write it.
    - Summary of the meetings of the BOD made available to all members, especially w.r.t. decisions made."
- Events: Hotel and location details should be available on the website for ALL plenary/full meetings in the next 12 months. I also would like to see the meeting agendas being generated and published in advance of the meetings, as they used to be.
- Any major achievements ie documents going to review; Details of the next technical meetings
- Summary of major achievements, issues & progress after each plenary.
- Equivalent of WISPR status on all the WGs.
