femtoforum

driving convergence worldwide

Date: 1st February 2012

To: Liliana Dinale, Chairman of Architecture Working Group (ARC) of the Open Mobile Alliance, liliana.dinale@ericsson.com; OMA-LIAISON@mail.openmobilealliance.org

From: Andy Germano
Vice Chairman, Femto Forum
andy@femtoforum.org

Subj.: FemtoZone Services APIs - Implementation Specification

Dear Liliana, members of the OMA Architecture Working Group,

Following the Cooperation agreement between OMA and Femto Forum (approved by the OMA Board in November 2011), Femto Forum would be pleased to establish a liaison for the standardization of the in-subject APIs, by means of one or more Technical Specifications to be issued by OMA.

FemtoZone Services are Enhanced Applications exploiting the Femto ecosystem's capabilities, exposed through convenient APIs, which need to be standardized. Femto Forum has already defined FemtoZone Services APIs at high level, and this work will constitute the very first input in order to start their standardization by OMA.

Moreover, upon OMA's formal acceptance of the present Liaison Statement, the Femto Forum, through interested companies that are also OMA members, will support the creation of one or more relevant OMA "Work Item Documents" (WID), as required by OMA internal processes.

Therefore, the Femto Forum is kindly asking you to provide an answer to the present Liaison Statement proposal, confirming your willingness to take on board the above described activity in order to make possible the carrying out of the mentioned Work Item.

Sincerely,

Andy Germano
Vice Chairman
Femto Forum
