

# IPSO - OMA Security & Identity

- Ownership of data?
  - device that produces data
  - device that provides data
  - SW system that produces data
  - SW system that provides data
- Who has the right to grant access to data/service?
  - owner of device that produces data
  - owner of device that provides data
  - owner of SW system that produces data
  - owner of SW system that provides data
  - system management level

# IPSO - OMA Security & Identity

- One way of defining this is:
  - Data is owned by the producer.
  - The owner can grant access to data/service and right to grant access data/service.
- Obviously there are other possible!!!
- A critical point is the identity of the entity being granted access or right to grant access.
- This points to the problem of identity management.
- Another related issue is the interoperability between SoS's with different ownership definitions.
